

IN THE CLAIMS:

Please amend Claims 63, 70 and 71 as shown below. The claims as pending in the subject application read as follows:

1-62. (Cancelled)

63. (Currently Amended) An image reproduction control apparatus,

comprising:

a storage unit using a detachable memory, the detachable memory storing a plurality of reproducible images and a reproduction instruction file, the reproduction instruction file including one or more file names specifying one or more images to be reproduced, the one or more file names in an order;

a reading section for reading the reproduction instruction file to determine the one or more file names specifying one or more images to be reproduced;

a reproduction control section for controlling reproduction of the one or more images to be reproduced by reading, in order, the one or more images to be reproduced specified by the reproduction instruction file;

a display control section for controlling display, in a display unit, so that a user may confirm whether or not reproduction of the one or more images is to be performed, the display unit displaying one or more thumbnail images corresponding to the images stored in the detachable memory, wherein the one or more thumbnail images displayed are distinguished between images that have been designated by the reproduction instruction file and images that have not been designated by the reproduction instruction

file corresponding to the one or more images to be reproduced specified by the reproduction instruction file; and

an operation section for starting the reproduction in accordance with input from a user and for performing the reproduction of the one or more images to be reproduced after confirmation by the user that the one or more images specified by the reproduction instruction file are to be reproduced, wherein, in the confirmation, the one or more thumbnail images are reproduced as image data to be displayed.

64. (Previously Presented) The image reproduction control apparatus of claim 63, further comprising a recording section for recording the reproduction instruction file in the detachable memory in accordance with user input.

65. (Previously Presented) The image reproduction control apparatus of claim 63, wherein said display unit displays the one or more images to be reproduced specified by the reproduction instruction file.

66. (Previously Presented) The image reproduction control apparatus of claim 63, wherein said display unit displays the one or more file names included in the reproduction instruction file.

67. (Cancelled)

68. (Previously Presented) The image reproduction control apparatus of claim 63, wherein the reproduction instruction file includes one or more reproduction instructions, and one or more of the instructions is a print instruction.

69. (Previously Presented) The image reproduction control apparatus of claim 63, wherein said display control section is operated in accordance with the attachment of said detachable memory.

70. (Currently Amended) A method of controlling image reproduction, the method comprising:

providing a storage unit using a detachable memory, the detachable memory storing a plurality of reproducible images and a reproduction instruction file, the reproduction instruction file including one or more file names specifying one or more images to be reproduced, the one or more file names in an order;

reading the reproduction instruction file to determine the one or more file names specifying one or more images to be reproduced;

controlling reproduction of the one or more images to be reproduced by reading, in order, the one or more images to be reproduced specified by the reproduction instruction file;

controlling display, in a display unit, so that a user may confirm whether or not reproduction of the one or more images is to be performed, the display unit displaying one or more thumbnail images corresponding to the images stored in the detachable memory, wherein the one or more thumbnail images displayed are distinguished between images that have been designated by the reproduction instruction file and images that have

not been designated by the reproduction instruction file corresponding to the one or more images to be reproduced specified by the reproduction instruction file; and

starting the reproduction in accordance with input from a user and for performing the reproduction of the one or more images to be reproduced after confirmation by the user that the one or more images specified by the reproduction instruction file are to be reproduced, wherein, in the confirmation, the one or more thumbnail images are reproduced as image data to be displayed.

71. (Currently Amended) A computer-readable storage medium storing a program for executing a method of controlling image reproduction, the method comprising:

providing a storage unit using a detachable memory, the detachable memory storing a plurality of reproducible images and a reproduction instruction file, the reproduction instruction file including one or more file names specifying one or more images to be reproduced, the one or more file names in an order;

reading the reproduction instruction file to determine the one or more file names specifying one or more images to be reproduced;

controlling reproduction of the one or more images to be reproduced by reading, in order, the one or more images to be reproduced specified by the reproduction instruction file;

controlling display, in a display unit, so that a user may confirm whether or not reproduction of the one or more images is to be performed, the display unit displaying one or more thumbnail images corresponding to the images stored in the detachable memory, wherein the one or more thumbnail images displayed are distinguished between

images that have been designated by the reproduction instruction file and images that have not been designated by the reproduction instruction file corresponding to the one or more images to be reproduced specified by the reproduction instruction file; and

starting the reproduction in accordance with input from a user and for performing the reproduction of the one or more images to be reproduced after confirmation by the user that the one or more images specified by the reproduction instruction file are to be reproduced, wherein, in the confirmation, the one or more thumbnail images are reproduced as image data to be displayed.

72-77. (Cancelled)
